A new way of documentation

## Decisions on the SACE meeting on the future of JDemetra+ documentation

- A switch to an electronic documentation
  - Developed as a Wiki, using the facility provided by Github
  - Includes formulas and videos/gifs
- Open to anyone, with a limited number of "editors,,
  - Sylwia, Jean, Dominique and representatives from ONS and the Bundesbank
- The SAUG will be solicited for proof reading in a first time.
- Some user cases will be added to the documentation. The facility to post "issues" will be used to organize discussion around a specific topic.
- A requirement for an option to print a documentation (?)

## Lessons learned from the experiments with the Quick Start

- A first draft available at: <https://github.com/Immurb/TestWiki/wiki/JDemetra-2.2-Quick-Start>
- Advantages
  - Easy to add tables, pictures, videos/gifs
- Drawbacks:
  - Time consuming (especially to produce gifs (ScreenToGif tool))
  - Changes to the content of Quick start in PDF are necessary
    - Gifs
    - Footnotes
  - Limited flexibility
